

RELIABILITY

DAROS

We offer a comprehensive service to our customers in all aspects of the subject of piston rings. The standard piston ring types for MAN B&W 2-stroke engines are available from our own warehouse in Halstenbek, usually on short notice, as well as the special tools for monitoring the wear of the piston rings while still installed.

The longtime relationship with the maker enables us to quickly receive piston rings not available ex our own stock. Short routes and short delivery times are our goal, whenever possible.

Due to the close and direct cooperation with the factory we can offer assistance with many technical questions all around the topic of piston rings. Also, if needed, an analysis of piston rings is possible in the laboratory of the piston ring maker for support.

Feeler gauge for PoP-Rings, as described in MAN B&W Service Letter SL 12-562 / JAP.

Layer thickness gauge
Dualscope
